

# Drive continuous visibility and insight into your SaaS portfolio

**Enhance your SaaS discovery process with full transparency and authority by seamlessly integrating LeanIX and Netskope CASB.**

## CHALLENGE

SaaS applications are easy to access and deploy. In fact, employees often subscribe to SaaS applications and start using them without involving IT. As a result, and despite efforts to maintain a comprehensive overview of the entire IT landscape, businesses can be left wondering, “How many SaaS applications does my application landscape have and who uses them?”

Ensuring that the technology landscape aligns with the overall business objectives requires a comprehensive understanding of all applications the organization uses, including all SaaS applications. Without a clear overview of SaaS applications in the IT landscape, controlling costs and mitigating risks associated with unauthorized or non-compliant applications becomes challenging, if not impossible. Effective application portfolio management requires a complete inventory of all your SaaS applications. Creating this inventory calls for effective SaaS discovery.

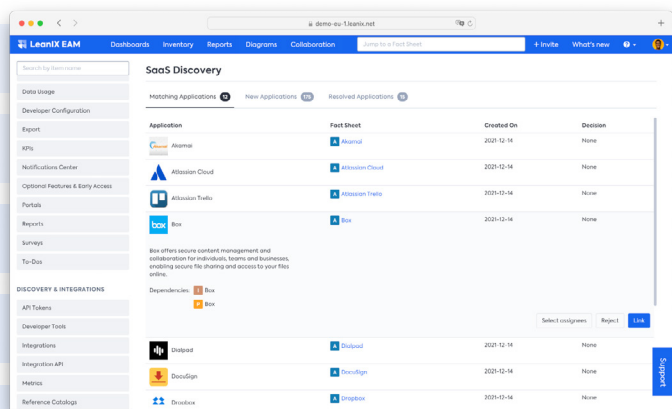

### SOLUTION

CASBs help monitor and control network traffic between end users and cloud service providers. They allow organizations to discover all the SaaS applications in use, irrespective of whether they are sanctioned or unsanctioned, hence making them one of the best source for discovering SaaS applications within your organization.

LeanIX integrates with Netskope CASB to simplify continuous SaaS discovery. With LeanIX, you can create a comprehensive SaaS inventory and track your SaaS application usage to maximize your investment value while mitigating risks that could lead to high costs.

## TOTAL TRANSPARENCY WITH AUTOMATED SAAS DISCOVERY

- ✓ Discover SaaS applications from Netskope
- ✓ Create a reliable inventory by uncovering all business-managed applications leveraging the SaaS Catalog
- ✓ Ensure data completeness through continuous discovery of SaaS
- ✓ Rationalize the applications that are no longer needed or are redundant by identifying SaaS that support the same business capabilities

## KEY INTEGRATION CAPABILITIES

### **Automatically discover all your SaaS**

Automate the process of discovering new SaaS and build an inventory of your SaaS applications for complete visibility

### **Enrich your inventory with SaaS reference data**

Leverage a comprehensive catalog of over 10,000 applications to create a detailed overview of your SaaS portfolio

### **Continuous discovery and tracking**

Easily add new Fact Sheets for all new SaaS or link to the existing ones to ensure seamless tracking of SaaS in your IT landscape

### **Govern & secure SaaS applications**

Identify SaaS applications that are SSO compatible and determine which applications need to be securely accessed via SSO or direct login

## THE BUSINESS IMPACT

The integration of LeanIX and Netskope CASB gives Enterprise Architects and IT leaders the power to create and maintain a complete, data-rich inventory of SaaS applications. As a result, they can eliminate redundancies, promote adoption, optimize spend and make sure the business maximizes the impact of SaaS resources.
